satelletronica

Technical information should always be available to the foremen and mechanics, because their careful and constant adherence to the instructions is essential to ensure vehicle road-worthiness and safety. In addition, the normal basic safety precautions for working on motor vehicles must, as a matter of course, be observed.

01 - Self diagnosis

1 - Self diagnosis

1.1 - Self diagnosis

Note:

The self-diagnosis monitors only a part of the injection and ignition system. For fault finding the binder "Fault finding engine" must also be used in every case.

1.2 - Function

The Simos control unit (J361) for the fuel injection and ignition system is equipped with a fault memory.

If faults occur in the sensors and components being monitored, they will be stored in the fault memory together with an indication of the type of fault.

The stored faults are output after initiating the fault display => Page 4 .

This fault memory must be erased once the faults have been eliminated => Page 4 .

A fault relating to the function of the Lambda control system can only be interrogated after a test drive of at least 10 minutes duration.

Faults which can be attributed to a tempory open circuit in the wiring or a loose contact, will also be stored. These faults will be displayed as sporadic faults "SP" and are automatically cancelled if they are not repeated after 50 engine starts.

1.3 - Technical data of self diagnosis

Equipped with

- Fault memory: Non-volatile memory and volatile memory1)
- Rapid data transfer

1) Will be cancelled after 50th engine start if fault has not occurred again.

Control unit identification

=> Page 2 ; connecting fault reader V.A.G 1551 and selecting engine electronics control unit

07 Code control unit	x	-
08 Read measured value block	x	x
10 Adaption	x	-

1.4 - Connecting fault reader V.A.G 1551 and selecting engine electronics control unit

Special tools, testers and auxiliary items

- Fault reader V.A.G 1551 with cable V.A.G 1551/3

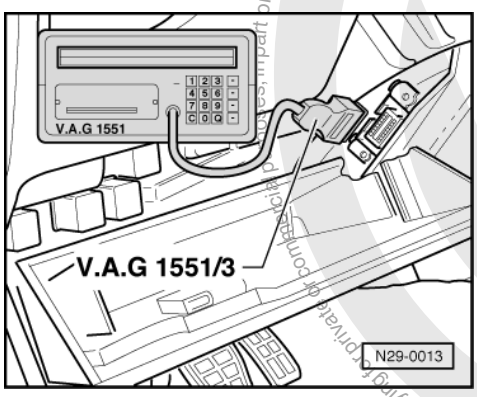
Note:

The vehicle system tester V.A.G 1552 can be used instead of the fault reader V.A.G 1551, however a print-out is not possible.

Test conditions

- Fuse 21 OK.
- Battery voltage at least 11 V
- Earth connections on engine and gearbox OK.
  (Earth connection engine: =>Page 22 , Item 18).

Work sequence



- -> Fold down left shelf.
- Connect fault reader (or vehicle system tester) with cable V.A.G 1551/3.
- Depending upon desired function:
  Switch on ignition
  or
  Start engine => Page 1 , Table "Selectable functions".

Notes:

- If the display does not indicate as described in the work sequence:

=> Fault reader operating instructions

- If due to an input fault "Fault in the data transfer!" is displayed, pull wire off fault reader, reconnect and repeat work step.

- Operate fault reader taking into account the information on the display:
- Press key 1 for "Rapid data transfer".

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

- Press keys 0 and 1 for address word "Engine electronics" and confirm entry with Q key.

-> The fault reader V.A.G 1551 display will show the control unit identification, e.g.:

```
6K0 906 025      SIMOS 4S2      3402
Coding 00000      WSC XXXXX
```

- 6K0 906 025 = Part No. of the control unit (for latest control unit version see parts catalogue)
- SIMOS 4S2 = System designation (4S) and version (2)
- 3402 = Programme level number
- Coding 00000 = Coding variants
- WSC = Workshop code

If the coding differs from the vehicle version, then:

- Check control unit coding => Page 3 , Coding Simos control unit
- Press ⇒key.

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Further measures see repair procedures.

1.5 - Coding Simos control unit

If the appropriate code for the vehicle is not displayed or if the control unit has been renewed, the control unit must be coded as follows.

Special tools, testers and auxiliary items

- Fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 with cable V.A.G 1551/3

Work sequence

- Connect fault reader V.A.G 1551 (V.A.G 1552) and select engine electronics control unit with the "Address word" 01. When doing this the ignition must be switched on.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 7 for the function "Code control unit" and confirm entry with Q key.

-> Indicated on display:

```
Code control unit      Q
Input code number xxxxx (0-32000)
```

- Enter the appropriate code number for this vehicle and confirm with Q key.

Coding	For vehicles with
00000	Manual gearbox

-> The fault reader V.A.G 1551 display will show the control unit identification, e.g.:

```
Coding 0000      WSC XXXXX
```

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG.

Note:

If an unauthorized code number is entered, the coding 00000 for vehicles with automatic gearbox will be automatically entered.

- Press ⇒key.

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 6 for the function "End output" and confirm entry with the Q key.

Note:

The code unit entered and shown on the display will not be used by the Simos control unit until the ignition has been switched off for at least 15 minutes.

An incorrect coding leads to:

- Engine running faults
- Increased fuel consumption
- Increased emissions
- Faults stored in fault memory which are not actually present
- Reduced gearbox life

1.6 - Interrogating and erasing fault memory

Special tools, testers and auxiliary items

- Fault reader V.A.G 1551 with cable V.A.G 1551/3

Note:

The vehicle system tester V.A.G 1552 can be used instead of the fault reader V.A.G 1551, however a print-out is not possible.

Work sequence

- Connect fault reader V.A.G 1551 (V.A.G 1552) and select engine electronics control unit with the "Address word" 01. When doing this the engine must be running at idling speed.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

Only when engine does not start:

- Interrogate fault memory with ignition switched on.

- Switch on printer with the Print button
  (Warning lamp in button lights up).

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Operate fault reader taking into account the information on the display:
- Press keys 0 and 2 for function "Interrogate fault memory" and confirm entry with Q key.

-> The number of faults stored or "No fault recognised!" will be shown on the display.

```
X Faults recognised!
```

satelettronica

If no fault is stored:

- Press ⇒key.

If one or more faults are stored:

The faults stored will be displayed and printed out one after the other.
Then the display will show:

- Locate and eliminate faults printed out as per fault table => Page 5 .
- Press keys 0 and 5 for the function "Erase fault memory" and confirm entry with Q key.

-> Indicated on display:

```
Rapid data transfer
Fault memory is erased!
```

Note:

If the ignition is switched off between interrogating fault memory and erasing fault memory, the fault memory will not be erased.

- Press ⇒key.

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 6 for the function "End output" and confirm entry with the Q key.

Note:

If a fault is present which is not recognised by the self diagnosis, carry out further fault finding using the fault table in "Engine fault finding" binder.

1.7 - Fault table

Notes:

- The fault table is listed according to the 5 digit fault code on the left.
- Explanation of the fault types (e.g. "open circuit/short circuit to earth"):

=> Fault reader operating instructions

- Before renewing components indicated as being faulty, check the wiring and connectors to these components as well as the earth connections using current flow diagram. This is particularly relevant if faults are output as "occurring sporadically" (SP).

Output on V.A.G 1551 printer	Possible causes of fault	Possible effects	Fault remedy
00282 Throttle valve positioner - V60-1)			
Short circuit	- Wiring open circuit or short to earth/positive - V60 defective/sticking	- Cold starting problems - Cold idling problems	- Check V60 =>Page 48 , checking throttle valve control part

1.8 - Final control diagnosis

The final control diagnosis activates the following components in the stated sequence:

1. Fuel pump relay (J17)
2. Activated charcoal filter solenoid valve 1 (N80)
3. Intake manifold change-over valve (N156), (two-way valve)

Special tools, testers and auxiliary items

- Fault reader V.A.G 1551 with cable V.A.G 1551/3
- Test box V.A.G 1598/18
- Adapter set V.A.G 1594
- Diode test lamp V.A.G 1527
- Current flow diagram

Test conditions

- Fuse 15,18 and 21 OK.

Work sequence

- Connect fault reader V.A.G 1551 (V.A.G 1552) and select engine electronics control unit with the "Address word" 01. When doing this the ignition must be switched on.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Operate fault reader taking into account the information on the display:
- Press keys 0 and 3 for the function "Final control diagnosis".

-> Indicated on display:

```
Rapid data transfer      Q
03 Final control diagnosis
```

Activating fuel pump relay (J17):

- Confirm input with Q key.

-> Indicated on display:

```
Final control diagnosis
Fuel pump relay J17
```

The fuel pump relay (on the relay plate with fuse box, relay position 12) must click until switching to the next final control by pressing the ⇒button.

Note:

During the activation of the fuel pump relay the fuel pump must be heard to run at intervals.

If the relay does not click:

- Check fuel pump relay:

=> Current flow diagrams, Electrical fault finding and Fitting locations, Fuel supply system.

satelettronica

Activating activated charcoal filter solenoid valve 1 (N80):

Test conditions

- Fuse 15 OK.

- Press ⇒key.

-> Indicated on display:

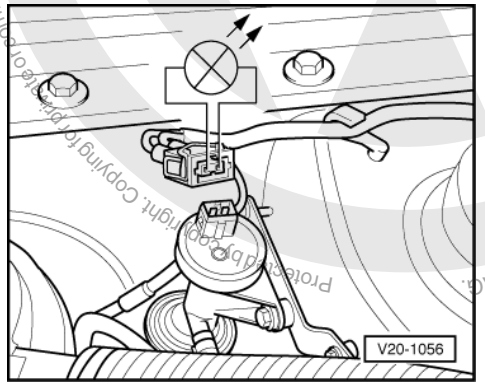
```
Final control diagnosis
Solenoid valve 1 for activated charcoal
filter N80
```

The activated charcoal filter solenoid valve 1 (under air cleaner housing) must click until the next final control element is selected by pressing the ⇒ button.

The valve clicks but a fault is still suspected (valve does not open or close):

- Remove air filter.
- Pull hose off solenoid valve (from activated charcoal filter).
- Connect auxiliary hose.
- During final control diagnosis blow into auxiliary hose (in direction of throttle housing).
  Valve must open and close

If the solenoid valve does not click:



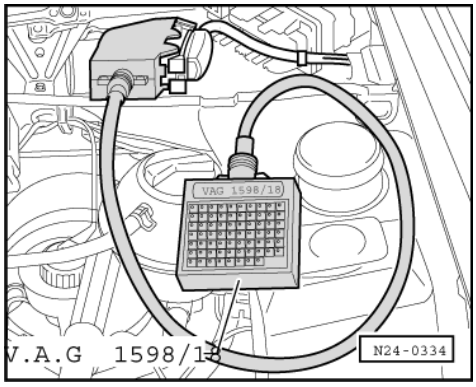
- -> Pull 2 pin connector off valve and connect diode test lamp V.A.G 1527 with aux. cables from V.A.G 1594 to disconnected connector.
  The LED must flash

LED flashes:

- Renew solenoid valve.

LED does not flash:

- Switch off ignition.



satelettronica

- -> Connect test box V.A.G 1598/18 to control unit wiring loom -arrow-.
- Check wire between test box socket 33+2 pin connector contact 1 for open circuit according to current flow diagram.
  Wire resistance: Max. 1.5 ω

If no fault in wire is detected:

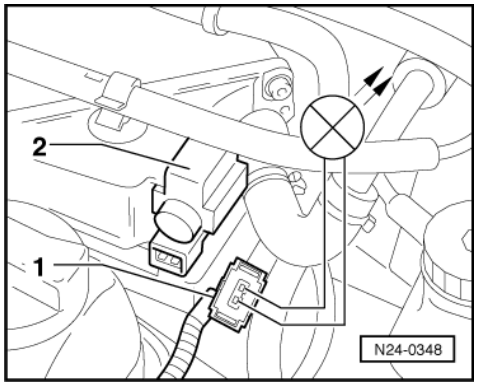
- Check solenoid valve voltage supply according to current flow diagram, if necessary renew Simos control unit (J361).

Activate intake manifold change-over valve (N156):

- Press ⇒key.

-> Indicated on display:

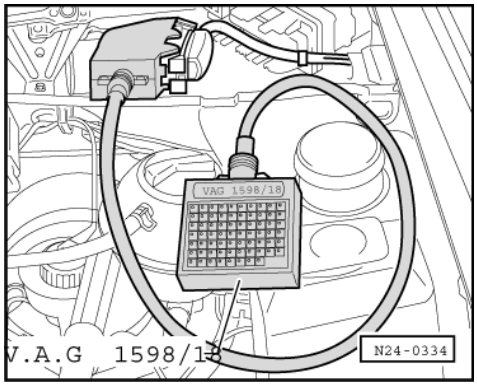
```
Final control diagnosis
Intake manifold change-over valve -N156
```



- -> Pull 2 pin connector -1- off valve -2- and connect diode test lamp V.A.G 1527 with aux. cables from V.A.G 1594 to disconnected connector.
  The LED must flash

LED does not flash:

- Switch off ignition.



- -> Connect test box V.A.G 1598/18 to control unit wiring loom -arrow-.
- Check wire between test box socket 22 and 2 pin connector contact 2 for open circuit according to current flow diagram.
  Wire resistance: Max. 1.5 ω

If no fault in wire is detected:

- Check intake manifold change-over valve (N156) voltage supply according to current flow diagram. 2 pin connector contact 1 and vehicle earth.
  Specification: min. 11 V

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG.
satelettronica

If the voltage supply is OK and no fault is present in the wiring:

- Check intake manifold change-over valve => Page 45 .
- Press ⇒key.

Note:

After completion of the final control diagnosis input 06 for "End output" function and confirm with Q.

- Switch off ignition.

1.9 - Read measured value block

- Connect fault reader V.A.G 1551 (V.A.G 1552) and select engine electronics control unit with the "Address word" 01. When doing this the engine must be running at idling speed.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 8 for the function "Read measured value block" and confirm entry with Q key.

-> Indicated on display:

```
Read measured value block     HELP
Input display group number XX
```

- Enter relevant display group number and confirm entry with Q key.

Note:

To change to another display group proceed as follows:

Display group	V.A.G 1551	V.A.G 1552
Higher	Press key 3	Press ↑key
Lower	Press key 1	Press ↓key
Skip	Press key C	Press key C

Test conditions

- Vehicle stationary, engine idling
- Engine oil temperature min. 80 °C
- Electrical consumers switched off (radiator fan must not run during the check)
- Air conditioner switched off

1.10 - Display group overview

satelettronica

1.3 - Servicing injection part

Servicing ignition part

=> Repair group 28

Notes:

- Fuel hoses in engine compartment must only be secured with spring type clips. The use of clamp or screw type clips is not permissible.
- The control unit for the fuel injection and ignition system is equipped with a fault memory. Before carrying out repairs, adjustment work and fault finding the fault memory must be interrogated and the vacuum connections checked (outside air).
- Components marked with * are checked via the self diagnosis.
  => Page 4 , interrogating fault memory
- Components marked with ** are checked via the final control control diagnosis => Page 12 .
- For trouble-free operation of the electrical components, a voltage of at least 11.5 V is necessary.
- Do not use sealants containing silicone. Particles of silicone drawn into the engine, will not be burnt in the engine and damage the Lambda probe.

- If the engine starts, runs for a short period and then stops, after fault finding, repairs or component tests, then the fault may lie with the immobilizer which is blocking the engine control unit. The fault memory must be interrogated and if necessary the control unit matched => Page 65 .
- During some checks it can happen that the control unit will recognise and store a fault. Therefore after completing all checks and repairs the fault memory must be interrogated and if necessary erased.
  => Page 4 , interrogating fault memory

-> Fig. 1 Resistance graph

The diagram is valid for coolant temperature sender (G62) and intake air sender (G42).

Scale A shows resistance values for temperature range 0...50 °C and scale B the values for temperature range 50...100 °C.

Examples:

- 30 °C corresponds to a resistance from 1500...2000 ω
- 80 °C corresponds to a resistance from 275...375 ω

1.7 - Safety precautions

Warning!
The fuel system is pressurized! Before loosening hose connections or opening the test connection, place a cloth around the connection. Then carefully pull hose off or remove the plug.

To prevent injuries to persons and/or damage to the fuel injection and ignition system, the following must be noted:

- Do not touch or disconnect ignition wiring when the engine is running or being turned at starter speed.
- The ignition must be switched off before connecting or disconnecting injection or ignition system wiring or tester cables.
- If the engine is to be turned at starter speed, without starting, e.g. when checking compressions, pull 3 pin connector off ignition transformer.

1.8 - Rules for cleanliness

When working on the fuel supply/injection system, pay careful attention to the following "5 rules":

- Thoroughly clean all unions and the adjacent areas before disconnecting.
- Place parts that have been removed on a clean surface and cover. Do not use fluffy cloths!
- Carefully cover opened components or seal, if the repair cannot be carried out immediately.
- Only install clean components:
  Only unpack replacement parts immediately prior to installation.
  Do not use parts that have been stored loose (e.g. in tool boxes etc.).
- When the system is open:
  Do not work with compressed air if this can be avoided.
  Do not move vehicle unless absolutely necessary.

1.9 - Technical data

Engine code	AFT
Idling check2) Idling speed2)	 790...8901)
Simos control unit3) Part number	 => Parts catalogue
Max. engine speed rpm	6300...6500

1) Up-to-date specifications:

=> Exhaust emissions test binder

2) Not adjustable

3) If replaced carry out basic setting => Page 37

1.10 - Idling check

Notes:

- Idling speed, ignition timing and CO content not adjustable.
- The idling speed is regulated to specification by the throttle valve positioner in conjunction with the DIS function.
- The position of the distributor has no influence on ignition timing.

- CO content regulated by Lambda regulation. Faults in Lambda control are detected in self-diagnosis and stored in fault memory.

Special tools, testers and auxiliary items

- Fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 with cable V.A.G 1551/3

Check conditions

- Engine oil temperature at least 80 °C
- Electrical consumers switched off (radiator fan must not run during the check)
- Air conditioner switched off
- Accelerator cable adjustment OK

=> Repair group 20, removing and installing parts of the fuel supply system, adjusting accelerator cable

Test sequence

- Start engine and run at idling speed.
- Interrogate fault memory, if necessary, repair fault and erase fault memory.
  => Page 4 , interrogating and erasing fault memory
- Then:
  - Leave fault reader V.A.G 1551 connected.
  - Continue running engine at idling speed.

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 8 for the function "Read measured value block" and confirm entry with Q key.

-> Indicated on display:

1.11 - Performing basic setting

Note:

The basic setting matches the Simos control unit to the throttle valve control part with the ignition switched on.

Special tools, testers and auxiliary items

- Fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 with cable V.A.G 1551/3

Test conditions

- No faults stored in fault memory
  => Page 4 , interrogating fault memory

Test sequence

- Switch ignition on.
- Interrogate fault memory, if necessary, repair fault and erase fault memory.
  => Page 4 , interrogating and erasing fault memory

- Then:

-> Indicated on display:

```
Rapid data transfer     HELP
Select function XX
```

- Press keys 0 and 4 for the function "Introduction of basic setting" and confirm entry with Q key.

-> Indicated on display:

```
Basic setting     HELP
Input display group number XX
```

- Press keys 0 and 1 for "Display group number 01" and confirm entry with Q key.

-> Indicated on display:
(1...4 = Display zones)

```
System in basic setting 1
     1     2     3     4
```

Note:

After confirming the display group number 01 the throttle valve positioner will be moved to the min., max. and three intermediate positions and the control unit will store each individual throttle valve angle in the permanent memory. The throttle valve will then remain in the start position.

- Terminate engine basic setting by pressing the⇒ button.
- Press keys 0 and 6 for the function "End output" and confirm entry with the Q key.
- Switch off ignition.

Note:

The ignition must remain switched off for at least 15 seconds so as to store the basic setting.

- Check the operating mode of the throttle valve control part => Page 49

1.12 - Checking Lambda probe and Lambda control

Special tools, testers and auxiliary items

- Fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 with cable V.A.G 1551/3
- Test box V.A.G 1598/18
- Hand multimeter V.A.G 1526 or multimeter V.A.G 1715
- Adapter set V.A.G 1594
- Current flow diagram

Check conditions

- Coolant temperature at least 80 °C
- Exhaust system between catalyst and cylinder head free of leaks

Functional check

- Connect fault reader V.A.G 1551 (V.A.G 1552) and select engine electronics control unit with the "Address word" 01. When doing this the engine must be running at idling speed.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

satelettronica

- Press keys 0 and 8 for the function "Read measured value block" and confirm entry with Q key.

-> Indicated on display:

```
Read measured value block     HELP
Input display group number XX
```

- Press keys 0 and 5 for "Display group number 05" and confirm entry with Q key.

-> Indicated on display:
(1...4 = Display zones)

```
Read measured value block     5
     1     2     3     4
```

- Checking Lambda control operating condition in display zone 4:

Lambda control operating condition display:

- Lambda control on stop:

  5th position from right must display 0
  Display:: 00000000

- Lambda control active:

  4th position from right must display 1
  Display: 00001000

- Fault in fault memory:

  3rd position from right must display 0
  Display:: 00000000

- Lambda probe operationally ready:

  2nd position from right must display 1
  Display: 00000010

- Mixture:

  1st position from right must display 0 and 1 alternately
  Display: 00000001 (1 = rich mixture)
  Display: 00000000 (0 = lean mixture)

- Press C key.
- Press keys 0 and 1 for "Display group number 01" and confirm entry with Q key.

-> Indicated on display:
(1...4 = Display zones)

```
Read measured value block     1
     1     2     3     4
```

- Observe Lambda probe voltage in display zone 3. The voltage must fluctuate at least 30 time per minute
  in the range
  0.2...1.0 V.

Display	Cause	Continuation of check
approx. 2.51 V	Short to positive	=> Page 40 Checking basic voltage
approx. 1.52 V	Open circuit	=> Page 41 , Checking wiring

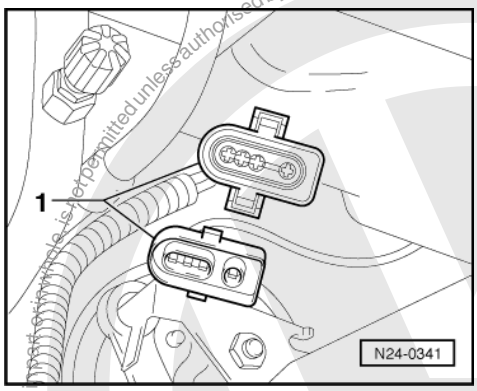
Display	Cause	Continuation of check
approx. 0.50 V	Short to wire 2	
approx. 0.15 V	Short to earth	
fluctuates between 0...1.1 V	Control OK.	---

- Press ⇒key.
- Press keys 0 and 6 for the function "End output" and confirm entry with the Q key.

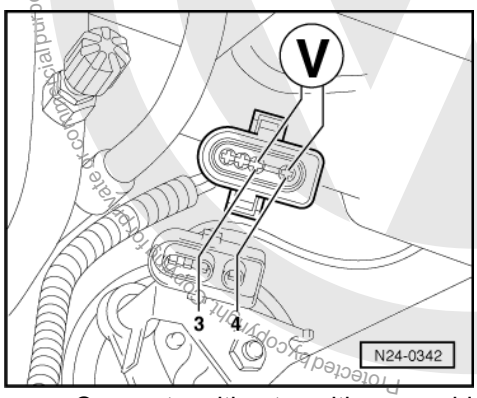
If the specifications for Lambda control operating conditions are not attained or the probe voltage does not fluctuate as stated:

- Check Lambda probe heating => Page 42 .
- Check Lambda probe for soot. Renew if necessary.

Checking basic voltage



- -> Separate 4 pin connector (black) to Lambda probe before catalyst (G39) -1-.



- -> Connect multimeter with aux. cables from V.A.G 1594 to measure voltage at contacts 3+4 (connector to engine control unit).
- Switch on ignition and measure basic voltage.
  Specification: 1.30...1.40 V
- Switch off ignition.

If the specification is not obtained:

- Check Lambda probe wiring
  => Page 41

If the specification is attained:

- Replace Lambda probe (G39).

- Additionally check all wiring for short to battery positive and to vehicle earth.

If a fault in wire is detected:

- Check wiring according to current flow diagram.

If no wiring fault is detected:

- Replace Lambda probe (G39).

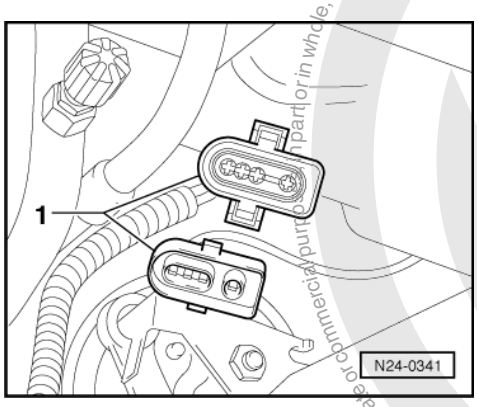
1.13 - Checking Lambda probe heating

Special tools, testers and auxiliary items

- Test box V.A.G 1598/18
- Hand multimeter V.A.G 1526 or multimeter V.A.G 1715
- Adapter set V.A.G 1594
- Current flow diagram

Test conditions

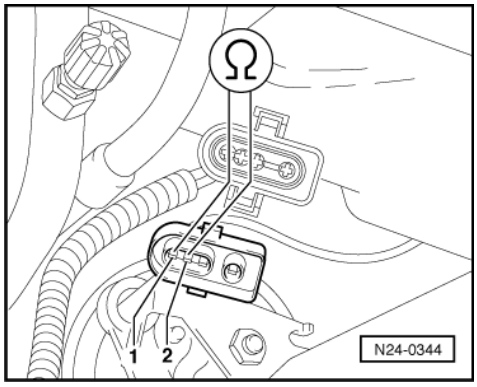
- Fuel pump relay OK



- Fuse 18 OK

Test sequence

- -> Separate 4 pin connector (black) to Lambda probe before catalyst (G39) -1-.



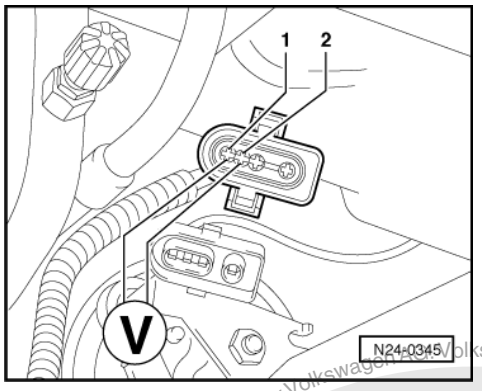
- -> Check probe heating at connector contacts 1+2 for continuity
  Specification: max. 200 ω

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

If the specification is not attained:

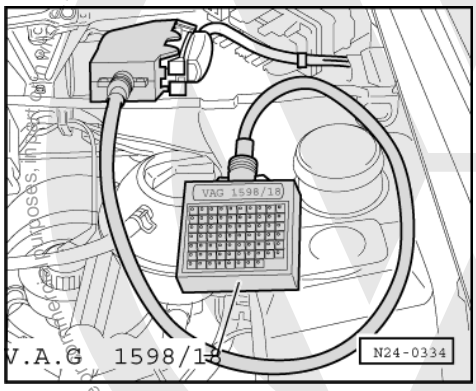
- Replace Lambda probe (G39).

If the specification is attained:

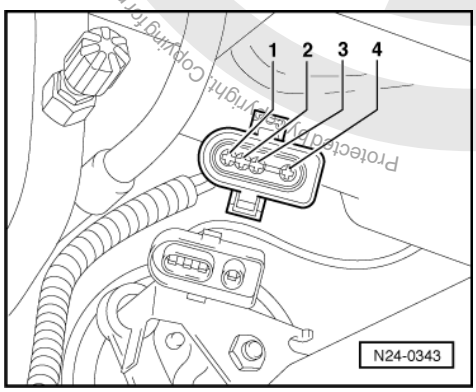


- -> Connect multimeter to measure voltage at contacts 1+2 of connector.
- Switch on ignition.
  Specification: approx. 4.5 V
- Start engine and run at idling speed.
- -> Connect multimeter to measure voltage at contacts 1+2 of connector.
- Switch off ignition.

If no voltage is present:



- -> Connect test box V.A.G 1598/18 to control unit wiring loom.



- -> Check wiring between test box and 4 pin connector for open circuit according to current flow diagram.
  Contact 2+socket 20
  Wire resistance: Max. 1.5 ω

If the specification is attained:

satelettronica

- Check wiring from contact 1 to fuel pump relay (J17) according to current flow diagram.

1.14 - Checking engine operating mode

Note:

Check establishes whether Simos control unit (J361) recognises the engine operating modes.

Special tools, testers and auxiliary items

- Fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 with cable V.A.G 1551/3

Test conditions

- Coolant temperature at least 80 °C

Test sequence

- Connect fault reader V.A.G 1551 (V.A.G 1552) and select engine electronics control unit with the "Address word" 01. When doing this the engine must be running at idling speed.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 8 for the function "Read measured value block" and confirm entry with Q key.

-> Indicated on display:

```
Read measured value block      HELP
Input display group number XX
```

- Press keys 0 and 4 for "Display group number 04" and confirm entry with Q key.

-> Indicated on display:
(1...4 = Display zones)

```
Read measured value block 4
     1     2     3     4
```

Display for operating modes:

- Overrun mode:

- Increase engine speed to above 3000 rpm.
- Close throttle abruptly.

  1st position from left must display 1 as long as the engine speed is above 1500 rpm
  Display: 10000000

- Idling:

  2nd position from left must display 1
  Display: 01000000

- Part throttle:

- Rev up evenly.

  3rd position from left must display 1

satelettronica

Display:: 00100000

- Full throttle:

- Floor accelerator pedal and release.

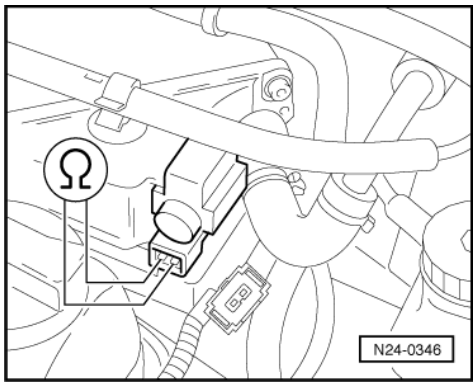
4th position from left must briefly display 1
Display: 00010000

Note:
Below 1500 rpm idling speed is again recognised.
- Press ⇒key.
- Press keys 0 and 6 for the function "End output" and confirm entry with the Q key.

If the specifications are not attained:
- Interrogate and erase fault memory, eliminate faults if necessary => Page 4 .
- Check accelerator mechanism for ease of operation.
- Check throttle valve potentiometer
  => Page 48 , checking throttle valve control part.

1.15 - Checking intake manifold change-over valve

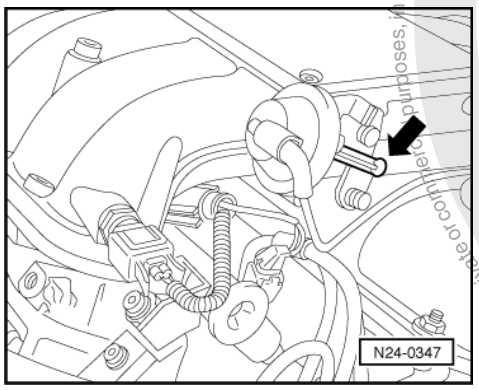
Test conditions



- Activation OK. =>Page 12 , Final control diagnosis

Checking voltage supply
- -> Pull 2 pin connector -1- off valve -2-.
- Connect multimeter to valve to measure resistance.
  Specification: 25...35 ω

If the specification is not obtained:
- Replace intake manifold change-over valve.



Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

Checking function

- Start engine and run at idling speed.
- -> Rev. up to 4000 rpm,
  the vacuum unit -arrow- must switch over.

If the vacuum unit does not switch over:

- Check vacuum hose/pipe to vacuum unit and vacuum unit.
- Check at lever if shaft is free to move.

If the following conditions are fulfilled:

- Activation (final control diagnosis) OK.
- Vacuum hose/pipe and vacuum unit OK.
- Shaft free to move

- Renew intake manifold change-over valve (N156) => Page 21 , item 5 .

1.16 - Checking air mass meter

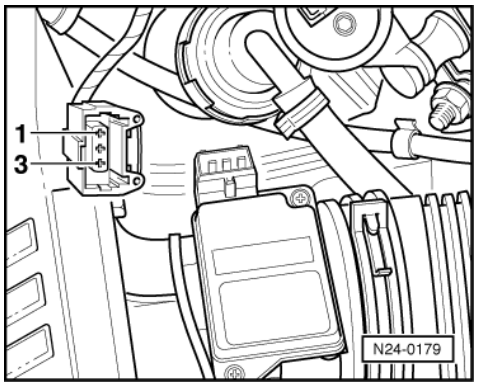
Special tools, testers and auxiliary items

- Fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 with cable V.A.G 1551/3
- Test box V.A.G 1598/18
- Hand multimeter V.A.G 1526 or multimeter V.A.G 1715
- Adapter set V.A.G 1594
- Current flow diagram

Test conditions

- Electrical consumers switched off (radiator fan must not run during the check)

Checking voltage supply



- -> Separate 3 pin connector to air mass meter.
- Connect multimeter to measure voltage at connector contacts 2+3.
- Switch on ignition
  Specification: min. 11 V
- Switch off ignition.
- Reconnect connector.

If no voltage is present:

- Check wiring =>Page 47

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

Read measured value block     1
     1     2     3     4
```

Functional check of sender

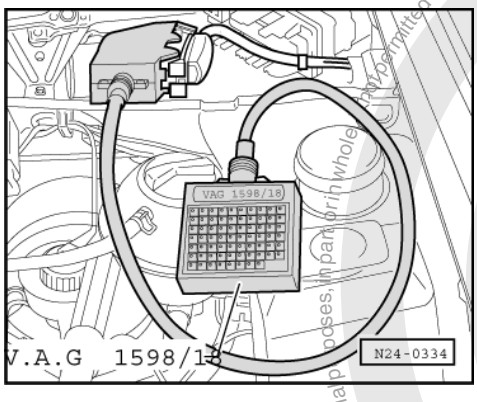
- Observe coolant temperature figure in display zone 2. The temperature figure must Increase uniformly and without interruption.

  If a temperature figure is displayed which deviates greatly from the senders ambient temperature, check sender wiring for transfer resistances.

Notes:

- Depending upon the temperature level, the display on fault reader will jump by 2...5 °C
- If irregular engine running occurs in certain temperature ranges and the temperature figure does not increase without interruption, the temperature signal is temporarily interrupted and the sender must be renewed.

- Press ⇒key.
- Press keys 0 and 6 for the function "End output" and confirm entry with the Q key.

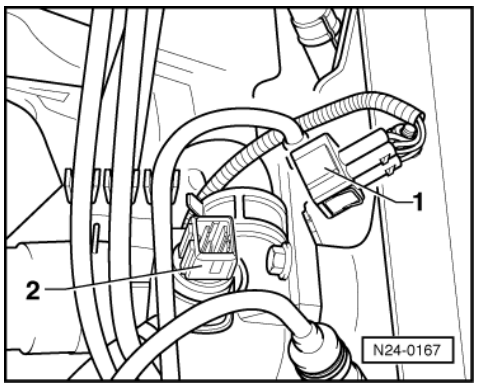


If the figure does not increase uniformly:

- Replace coolant temperature sender -2-.

If a G62 fault is indicated in fault memory even though the figure increases uniformly:

- Switch off ignition.
- -> Connect test box V.A.G 1598/18 to control unit wiring loom.



- -> Pull 4 pin connector -1- of coolant temperature sender (G62) -2-.

1.23 - Matching engine electronic control unit to electronic immobilizer

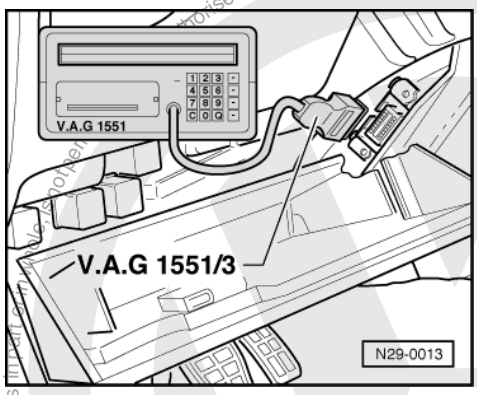
Special tools, testers and auxiliary items

- Fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 with cable V.A.G 1551/3

Test conditions

- Authorized vehicle key required

Work sequence



-> Fold driver's side stowage compartment down.
- Connect fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 with cable V.A.G 1551/3.
- Switch on ignition.
- Operate fault reader or vehicle system tester taking into account the information on the display:
- Press key 1 for "Rapid data transfer".
- Press keys 2 and 5 for address word "Immobilizer" and confirm entry with Q key.
- Press the ⇒key.

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 1 and 0 for function "Adaption" and confirm entry with Q key.

-> Indicated on display:

```
Adaption
Feed in channel number XX
```

- Press key 0 twice for "Channel number 0" and confirm entry with Q key.

-> Indicated on display:

```
Adaption     Q
Erase learnt values?
```

- Confirm input with Q key.

-> Indicated on display:

```
Adaption
Learnt values have been erased
```

- Conclude adaption by pressing ⇒ key.
- Press keys 0 and 6 for the function "End output" and confirm entry with the Q key.
- Switch off ignition.

satelettronica

Note:
The identity of the engine control unit is read into the immobilizer control unit when next switching the ignition on.

1.24 - Checking air conditioner and air conditioner compressor signals

Special tools, testers and auxiliary items
- Fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 with cable V.A.G 1551/3
- Test box V.A.G 1598/18
- Hand multimeter V.A.G 1526 or multimeter V.A.G 1715
- Adapter set V.A.G 1594
- Current flow diagram

Check conditions
- Function of air conditioner OK.
- Air conditioner switched off
- Interior of vehicle has room temperature (above 15 ° C)
- No faults stored in fault memory
  => Page 4 , interrogating fault memory

Test sequence
- Connect fault reader V.A.G 1551 (V.A.G 1552) and select engine electronics control unit with the "Address word" 01. When doing this the engine must be running at idling speed.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 8 for the function "Read measured value block" and confirm entry with Q key.

-> Indicated on display:

```
Read measured value block      HELP
Input display group number XX
```

- Press keys 0 and 1 for "Display group number 01" and confirm entry with Q key.

-> Indicated on display:
(1...4 = Display zones)

```
Read measured value block      1
   1      2      3      4
```

- Observe 8 digit number block in display zone 4. 3rd position from left must display 0.
  Display: 00000000
- Switch on air conditioner. Adjust lowest temperature and highest blower stage.

  3rd position from left must now display 1
  Display: 00100000

If the display does not change:

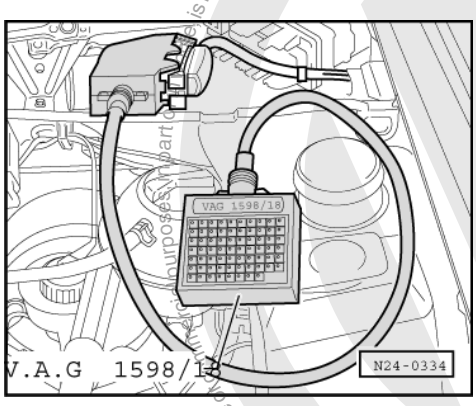
satelettronica

- -> Connect test box V.A.G 1598/18 to control unit wiring loom.
- Check wiring between test box sockets 13 and 39 and the air conditioner for open circuit according to current flow diagram.
  Wire resistance: Max. 1.5 ω

1.25 - Checking starter signal

Special tools, testers and auxiliary items

- Test box V.A.G 1598/18



- Hand multimeter V.A.G 1526 or multimeter V.A.G 1715
- Adapter set V.A.G 1594
- Current flow diagram

Test sequence

- -> Connect test box V.A.G 1598/18 to control unit wiring loom.
- Connect multimeter to measure voltage at test box sockets 1+32.
- Operate starter. Multimeter must indicate
  min. 8 V.

If the specification is not obtained:

- Check wiring to starter terminal 50 according to current flow diagram.

1.26 - Checking injectors

Special tools, testers and auxiliary items

- Test box V.A.G 1598/18
- Hand multimeter V.A.G 1526 or multimeter V.A.G 1715
- Diode test lamp V.A.G 1527
- Adapter set V.A.G 1594
- Current flow diagram

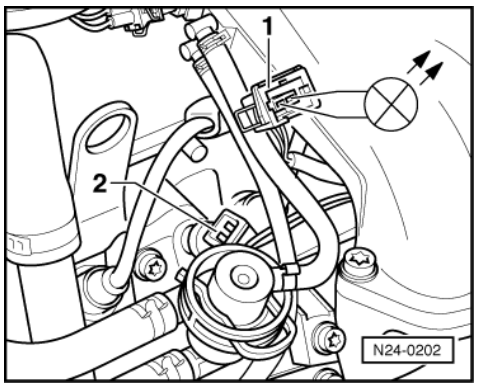
Check conditions

- Engine speed sender OK.
- Fuel pump relay OK

Checking activation

- Remove intake manifold upper part, => Page 31 , item 8 .

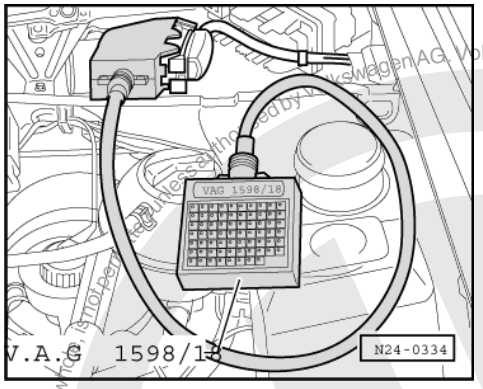
Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG. Copyright by Volkswagen AG. Copyright by Volkswagen AG



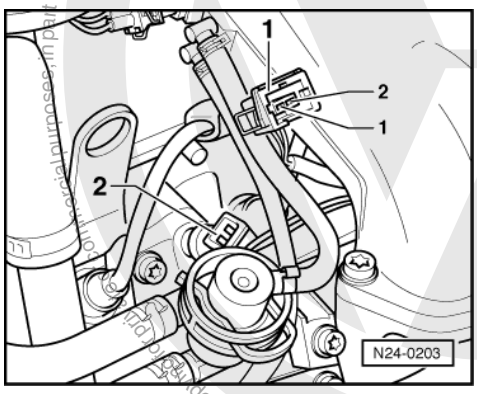
- -> Pull plug -1- off connection -2- and connect diode test lamp V.A.G 1527 with aux. cables from V.A.G 1594 to the contacts of the plug.
- Pull the connectors off injectors 2...4.
- Operate starter and check the voltage supply for No. 1 Cyl. injector.
  LED must flicker
- Repeat check on injectors 2...4.

The LED does not flicker:

- Switch off ignition.



- -> Connect test box V.A.G 1598/18 to control unit wiring loom.

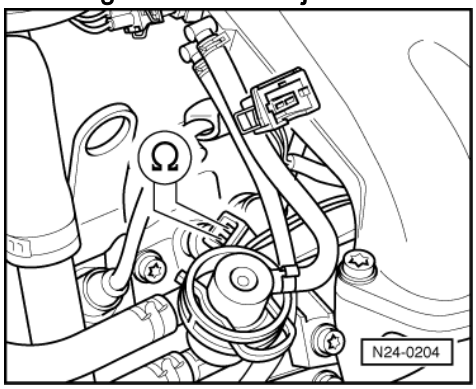


- -> Check wiring between test box and connector for open circuit according to current flow diagram.
  Injector 1: Contact 2+socket 02
  Injector 2: Contact 2+socket 46
  Injector 3: Contact 2+socket 47
  Injector 4: Contact 2+socket 48
  Wire resistance: Max.1.5 ω
- Check wiring between connector for injectors contact 1 and relay plate for open circuit according to current flow diagram.
  Wire resistance: Max. 1.5 ω
- Additionally check wires for short to one another.

satelettronica

Specification: ∞ω

Checking resistance of injectors



- -> Check resistance of injectors individually
  Specification: 15...20 ω

If the specification is not attained, replace injector(s) as necessary.

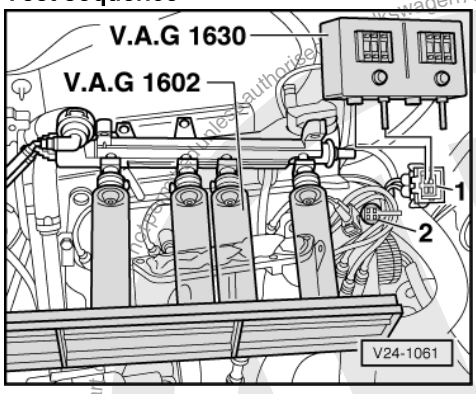
Checking spray pattern and for leaks

> Warning!
> The fuel system is pressurized! Before loosening hose connections or opening the test connection, wrap a cloth around the connection. Then release pressure by carefully pulling off the hose/sealing cap.

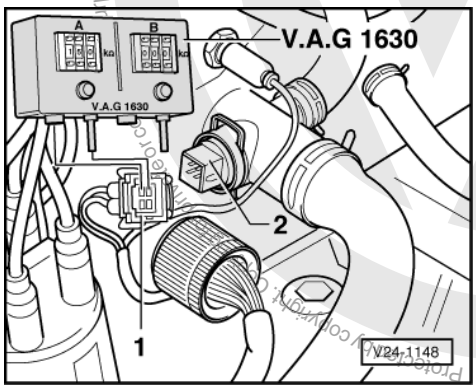
Special tools, testers and auxiliary items

- Adapter set V.A.G 1594
- Digital potentiometer V.A.G 1630
- Measuring unit V.A.G 1602

Test sequence



- Remove intake manifold upper part, => Page 31 , item 8 .
- Remove fuel manifold complete with injectors => Page 21 , Item 3 .
- -> Hold injectors in the measuring appliance V.A.G 1602.



satelettronica
Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

- -> Pull plug off coolant temperature sender (G62).
- Set digital potentiometer V.A.G 1630 -side A- to 15 kωand using aux. cables from V.A.G 1594 connect to contacts 1+3 of disconnected plug.
- Pull plug off ignition transformer.
- Operate starter (2nd person required). The injectors must pulsate and spray in accordance with firing order.
- Switch off ignition and check injectors for leaks. No more than
  2 drops/min
  may leak from each injector.

Note:

When installing the injectors ensure that the O rings

are not damaged.

1.27 - Checking fuel pressure regulator and holding pressure

The fuel pressure regulator controls the fuel pressure dependent upon intake manifold pressure.

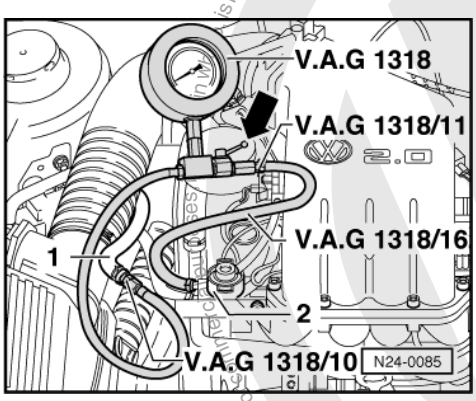
The specifications are dependent upon the fuel pump working pressure. This is
approx. 4 bar

Special tools, testers and auxiliary items

- Pressure tester V.A.G 1318
- Adapter 1318/10
- Adapter 1318/11
- Adapter 1318/16

Test sequence

Warning!
The fuel system is pressurized! Before loosening hose connections or opening the test connection, wrap a cloth around the connection. Then release pressure by carefully pulling off the hose/sealing cap.

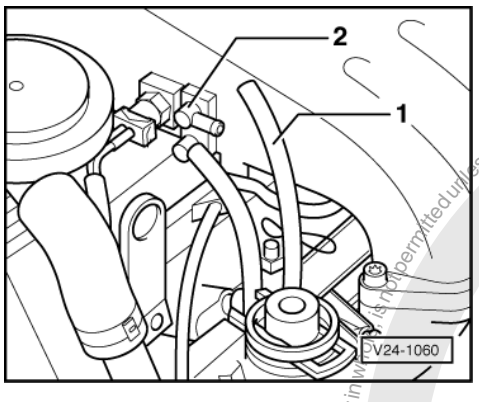


- -> Pull fuel supply pipe -1- off fuel manifold connection -2- and connect to pressure gauge V.A.G 1318 using adapter 1318/10.
- Connect pressure gauge V.A.G 1318 to fuel manifold -2- using adapter 1318/11 and 1318/16. Open pressure gauge cut-off tap (handle in throughflow direction -arrow-).
- Start the engine and run at idling speed.
- Check fuel pressure.
  Specification: Approx. 2.5 bar

If the specification is not obtained:

- Check quantity supplied by fuel pump.

Protected by copyright. Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



=> Rep. Gr. 20; Removing and installing parts of fuel system; checking fuel pump

If the specification is attained:

- -> Pull vacuum hose - 1- off connection -2-. The fuel pressure must rise to approx. 3.0 bar.
- Switch off ignition.
- Check for leaks and holding pressure by observing pressure drop on gauge. After 10 minutes there must be a residual pressure of at least 2.0 bar.

If the holding pressure drops below 2 bar:

- Start the engine and run at idling speed.

When the fuel pump has built-up the pressure again:

- Switch off ignition and use a second mechanic to seal the return pipe -with blue marking- on fuel manifold with a clamp.
- Watch pressure drop on gauge.

If the pressure does not drop:

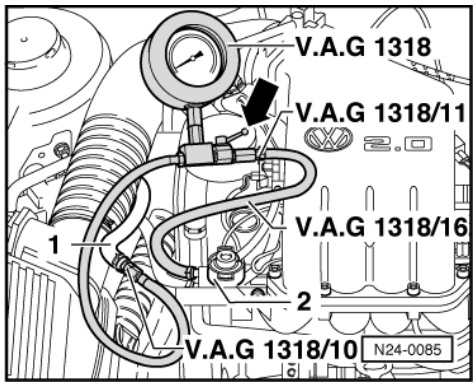
- Renew fuel pressure regulator => Page 22 , item 19 .

If the pressure drops again:

- Check pressure gauge for leaks.
- Check pipe connections, O rings on fuel manifold and injectors for leaks.
- Check fuel pump non-return valve:

=> Rep. Gr. 20; Removing and installing parts of fuel system; checking fuel pump

When the pressure gauge is removed after completing the test:



Copyright by Volkswagen AG. Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document.
satelettronica

- Switch off ignition.
- Hold a measuring container before the pressure gauge cut-off tap.
- -> Open pressure gauge cut-off tap -arrow- carefully and release pressure.

1.28 - Checking intake air system for leaks (unmetered air)

Checking with engine leak detector spray G 001 800 A1

Special tools, testers and auxiliary items

- Fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 with cable V.A.G 1551/3
- Engine leak detector spray G 001 800 A1

Notes:

- The vacuum in the intake system will cause the leak detector spray to be drawn in with the outside air. The leak detector spray reduces the ignitability of the mixture. This leads to a drop in engine speed and to a significant increase of the CO content.
- The safety precautions listed on the container must be adhered to.

Test sequence

- Connect fault reader V.A.G 1551 (V.A.G 1552) and select engine electronics control unit with the "Address word" 01. When doing this the engine must be running at idling speed.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 8 for the function "Read measured value block" and confirm entry with Q key.

-> Indicated on display:

```
Read measured value block     HELP
Input display group number XX
```

- Press keys 0 and 1 for "Display group number 01" and confirm entry with Q key.

-> Indicated on display:
(1...4 = Display zones)

```
Read measured value block 1
     1     2     3     4
```

- Note engine speed in display zone 1.
- Note Lambda probe voltage in display zone 3 and the area it fluctuates in.
- Systematically spray parts of the intake system with engine leak detector spray.

Engine speed or Lambda probe voltage does not change:

- Press the ⇒key.
- Press keys 0 and 6 for the function "End output" and confirm entry with the Q key.

If the engine speed drops or the Lambda probe voltage changes:

- Press the ⇒key.
- Press keys 0 and 6 for the function "End output" and confirm entry with the Q key.
- Check sprayed areas of intake system for leaks and rectify if necessary.

1.3 - Safety precautions

To prevent injuries to persons and/or damage to the injection and ignition system, the following must be observed:

- Do not touch or pull off ignition wiring when engine is running or turning at starter speed.
- The ignition must be switched off when disconnecting or connecting injection and ignition system wiring as well as test instrument cables.
- If the engine is to be turned at starter speed, without starting, e.g. when checking compressions, pull 3 pin connector off ignition transformer.

1.4 - Test data, spark plugs

Engine code	AFT
Ignition timing1)	
Checking position of distributor	=>Page 77
Checking ignition timing control	=>Page 82
Ignition timing	1-3-4-2
Spark plugs2)	
VW/Audi	101 000 033 AC
Manufacturer's designation	BKUR 5 ET
Electrode gap	0.7...0.9 mm
Tightening torque	30 Nm

1) Not adjustable

2) Up-to-date specifications:

=> Exhaust emissions test binder

1.5 - Checking position of distributor

Note:

The position of the distributor does not influence the ignition timing.

Special tools, testers and auxiliary items

- Fault reader V.A.G 1551 or vehicle system tester V.A.G 1552 with cable V.A.G 1551/3

Test sequence

- Connect fault reader V.A.G 1551 (V.A.G 1552) and select engine electronics control unit with the "Address word" 01. When doing this the engine must be running at idling speed.
  (Connecting fault reader and selecting engine electronics control unit => Page 2 .)

-> Indicated on display:

```
Rapid data transfer      HELP
Select function XX
```

- Press keys 0 and 8 for the function "Read measured value block" and confirm entry with Q key.

-> Indicated on display:

satelettronica

```
Read measured value block     HELP
Input display group number XX
```

- Press keys 0 and 7 for "Display group number 07" and confirm entry with Q key.

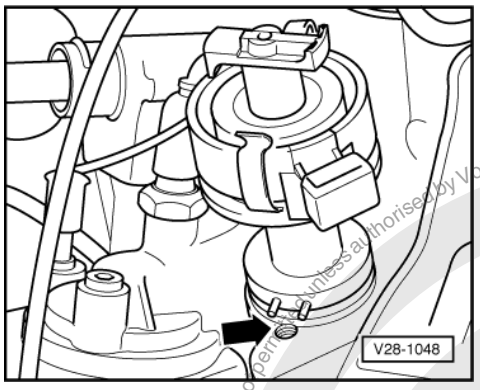
-> Indicated on display:
(1...4 = Display zones)

```
Read measured value block 1
     1     2     3     4
```

- Read off figure displayed in display zone 1.
  Specification: 57...60 or 1
- Read off figure displayed in display zone 2.
  Specification: 5...8
- Press ⇒key.
- Press keys 0 and 6 for the function "End output" and confirm entry with the Q key.

If the specifications are not attained:
- Check alignment of TDC marks on distributor => Page 78 , removing and installing distributor

If the TDC marks align:



- -> Pull out pins on distributor (if fitted) and turn distributor until the specifications in display zones 1 and 2 are achieved.

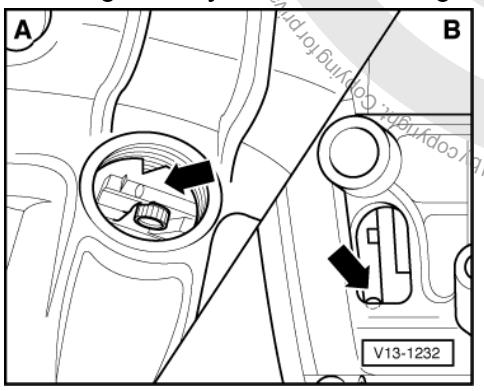
1.6 - Removing and installing distributor

Special tools, testers and auxiliary items

- Pin wrench Matra V159
- Torque wrench V.A.G 1331 (5 - 50 Nm)

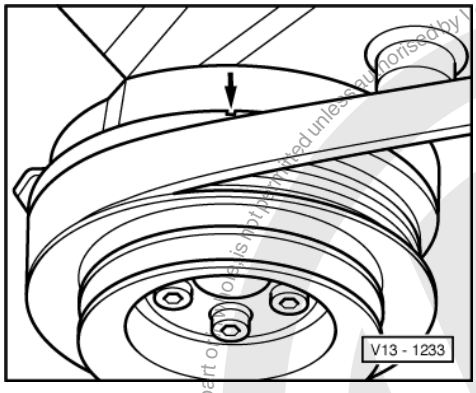
Note:
The Simos control unit requires the No. 1 cylinder TDC signal from the Hall sender to coordinate the injection and knock sensor systems according to the firing order.

Checking No. 1 cylinder TDC markings:



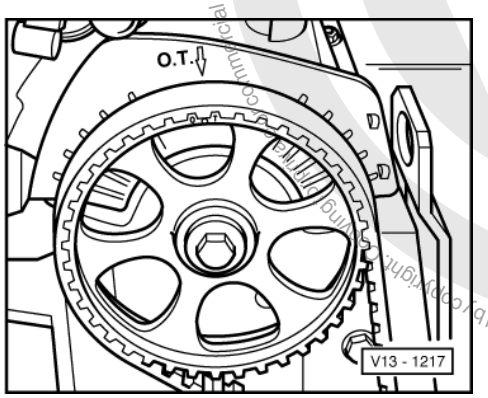
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

- -> Set flywheel -A- or drive plate -B- to TDC No. 1 cylinder.

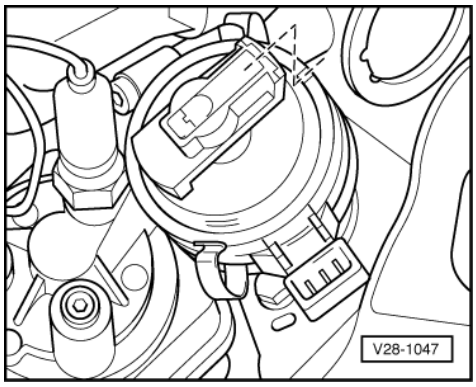


Engine removed

- -> Set vibration damper (V-belt pulley) to TDC No. 1 cylinder.



- -> Mark on camshaft sprocket must align with arrow on cylinder head.



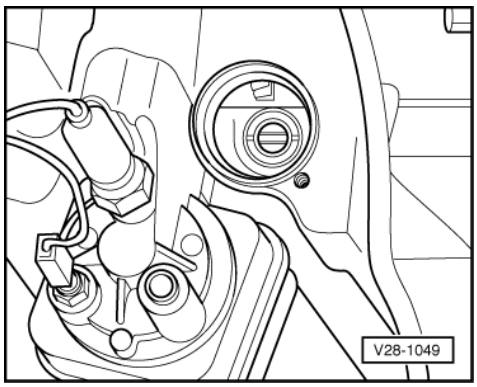
- -> Mark on distributor must align with mark on rotor arm or Hall sender cover.

Removing and installing distributor

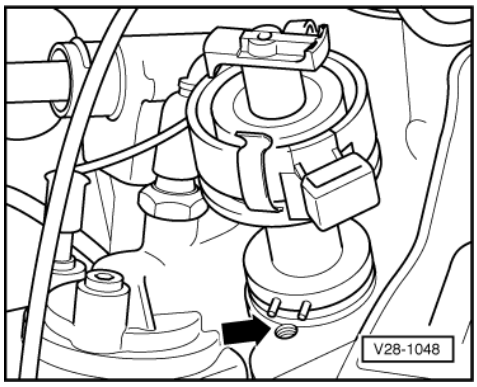
Test conditions

- Crankshaft and camshaft in No. 1 cylinder TDC position

Protected by copyright. Copying for private or commercial purposes, in part or in whole is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



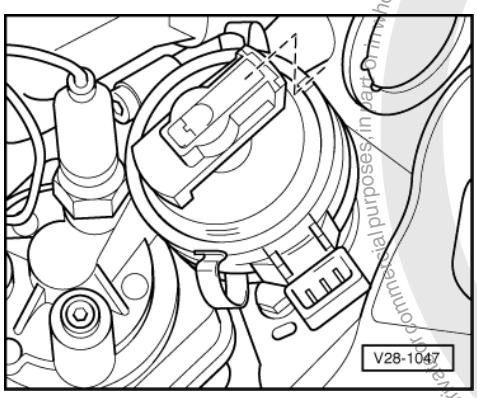
- -> Before installing the distributor align oil pump shaft drive tongue parallel to crankshaft.



- -> Install distributor. The pins on the distributor must point towards securing bolt threaded hole -arrow-.

Note:

When installing, turn rotor arm slightly right of the distributor marking. When inserting the rotor arm will turn back onto the marking.

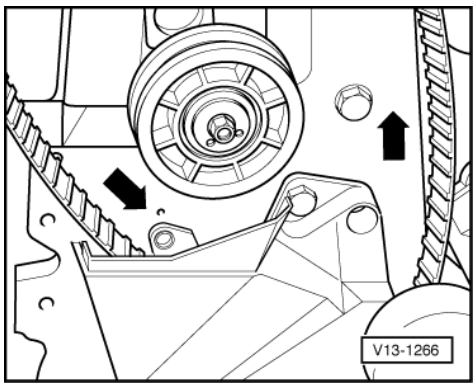


- -> Mark on distributor must align with mark on rotor arm or Hall sender cover.
- Tighten distributor securing bolt.
  Tightening torque: 25 Nm

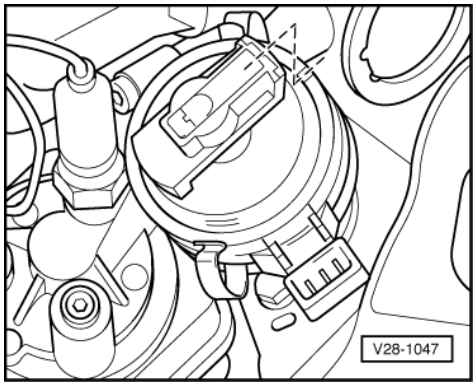
If no alignment of the markings can be achieved:

- Loosen tensioning roller and take toothed belt off camshaft sprocket.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



- -> Turn intermediate shaft sprocket with toothed belt so long in direction of arrow until rotor arm aligns with markings for No. 1 cylinder on distributor housing (toothed belt slides over crankshaft sprocket).

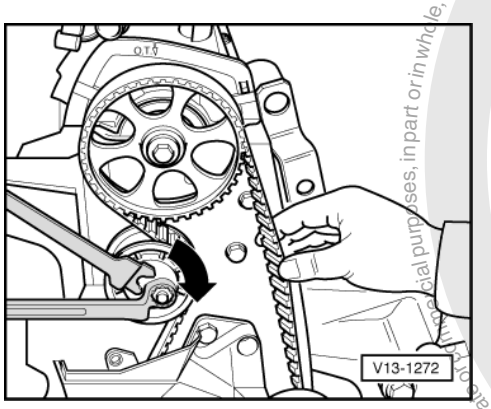


- -> Mark on distributor must align with mark on rotor arm or Hall sender cover.

- Place toothed belt on tensioning roller and camshaft sprocket.

Note:

For easier installation of the toothed belt loosen tensioner roller lock nut only approx. one thread.



- -> Tension toothed belt, to do this turn tensioner with pin wrench (e.g. Matra V159) in direction of arrow.

It must just be possible to turn the toothed belt through 90° with the thumb and forefinger in the centre between camshaft and intermediate shaft sprockets.

- Tighten tensioner lock nut.
  Tightening torque: 45 Nm
- Rotate crankshaft two full turns and check adjustment.
- Check distributor housing and rotor arm markings.
- Install upper toothed belt protective cover.
- Before fitting, clean distributor cap and check for cracks and signs of tracking, renew if necessary.

1.7 - Checking ignition timing control

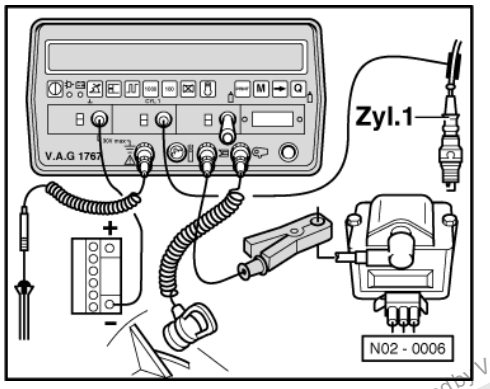
Special tools, testers and auxiliary items

- Ignition tester V.A.G 1767 or V.A.G 1367 with HT pick-up clamp V.A.G 1367/8

Check conditions

- No fault stored in fault memory
- Engine oil temperature at least 80 °C

Test sequence



- -> Connect ignition tester V.A.G 1767 or ignition tester V.A.G 1367 with HT pick-up clamp V.A.G 1367/8.
- Start engine and run at idling speed.
- Set ignition tester to 4000 rpm.
- Slowly increase speed to slightly above 4000 rpm until the ignition timing (advance figure) is displayed.
  Specification: 25...35 ° before TDC

If the specification is not obtained:

- Renew Simos control unit (J361)
  =>Page 25 , item 9 .

1.8 - Checking Hall sender

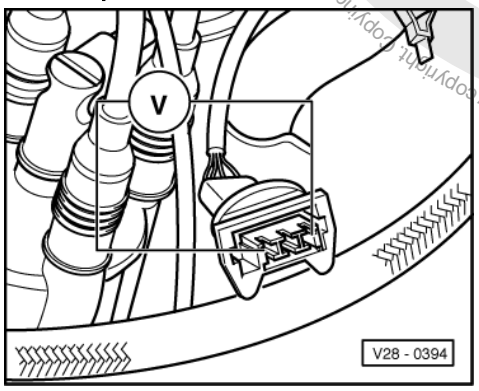
Special tools, testers and auxiliary items

- Test box V.A.G 1598/18
- Hand multimeter V.A.G 1526 or multimeter V.A.G 1715
- Adapter set V.A.G 1594
- Current flow diagram

Test conditions

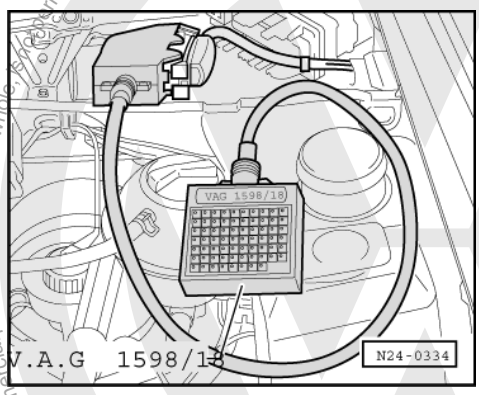
- Sender fault is recognised by self diagnosis

Test sequence

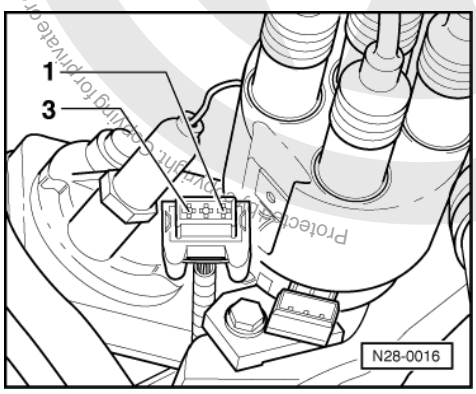


Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

- Pull plug off sender (distributor).
- -> Connect multimeter to measure voltage with aux. cables from V.A.G 1594 to the outer contacts of the plug.
- Switch on ignition.
  Specification: At least 10 V
- Switch off ignition.



- -> Connect test box V.A.G 1598/18 to control unit wiring loom.



- -> Check wiring between test box and 3 pin connector for open circuit according to current flow diagram.
  Contact 1+socket 35
  Contact 2+socket 44
  Contact 3+socket 45
  Wire resistance: Max. 1.5 ω
- Additionally check wires for short to one another.
  Contact 3+socket 44
  Contact 3+socket 35
  Contact 2+socket 35
  Specification: ∞ω

If no wiring fault is detected and voltage was present between contacts 1+3:

- Renew distributor with Hall sender
  =>Page 76 , Item 15 .

If no wiring fault is detected and no voltage was present between contacts 1+3:

- Renew Simos control unit (J361)
  =>Page 25 , item 9 .

1.9 - Checking knock sensor

Special tools, testers and auxiliary items

- Test box V.A.G 1598/18
- Hand multimeter V.A.G 1526 or multimeter V.A.G 1715

Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

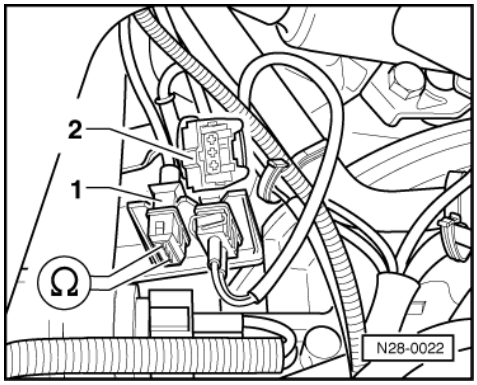
satelettronica

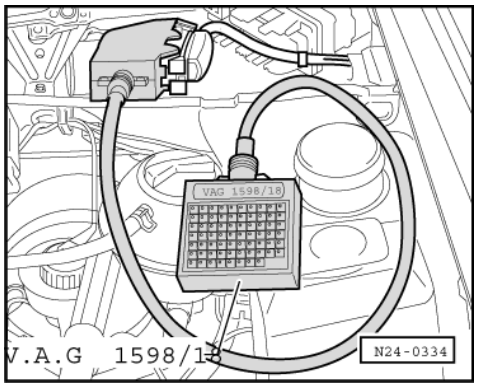
- Adapter set V.A.G 1594
- Current flow diagram



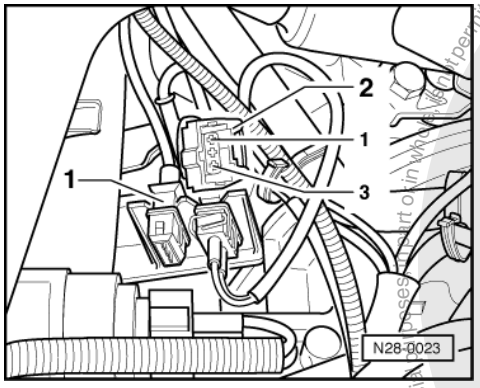
Test sequence

- -> Separate blue 3 pin connector -2- to knock sensor 1 (G61) -1-.
- Connect multimeter with aux. cables from V.A.G 1594 to measure resistance at contacts 1+2, 1+3 and 2+3 on connector to knock sensor.
  Specification ∞ω

If the specification is attained:



- -> Connect test box V.A.G 1598/18 to control unit wiring loom.



- -> Check wiring between test box and 3 pin connector for open circuit according to current flow diagram.
  Contact 1+socket 36
  Contact 2+socket 34
  Contact 3+socket 09
  Wire resistance: Max. 1.5 ω
- Additionally check wires for short to one another.
  Contact 3+socket 34
  Contact 3+socket 36
  Contact 2+socket 36

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

Specification: ∞ω

If no wiring fault is detected:

- Loosen knock sensor and tighten again to 20 Nm.
- Carry out test drive.

  During the road test the following operating conditions must be fulfilled:
  - The coolant temperature must exceed 80 °C .
  - When the temperature is reached, the operating conditions
    Idling
    Part throttle
    Full throttle
    Overrun
    must be attained several times.
  - At full throttle the speed must exceed 3500 rpm.

- Again interrogate the control unit fault memory.

If the fault is still present:

- Replace knock sensor (G61) =>Page 74 , item 7 .

1.10 - Checking ignition transformer and output stage

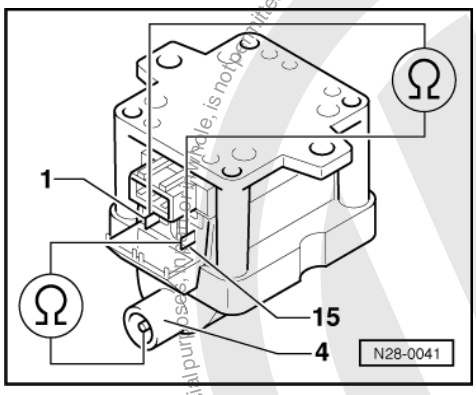
Special tools, testers and auxiliary items

- Test box V.A.G 1598/18
- Hand multimeter V.A.G 1526 or multimeter V.A.G 1715
- Adapter set V.A.G 1594
- Diode test lamp V.A.G 1527
- Current flow diagram

Check conditions

- Hall sender OK.

Checking ignition transformer



- Pull connector and H.T. cable off ignition transformer (N152).
- -> Check primary resistance between terminals 1 and 15.
  Specification: 0.5...1.5 ω
- Check secondary resistance between terminals 4 and 15.
  Specification: 2.5...4 kω

If the specifications are not attained:

- Replace ignition transformer => Page 74 , item 4 .

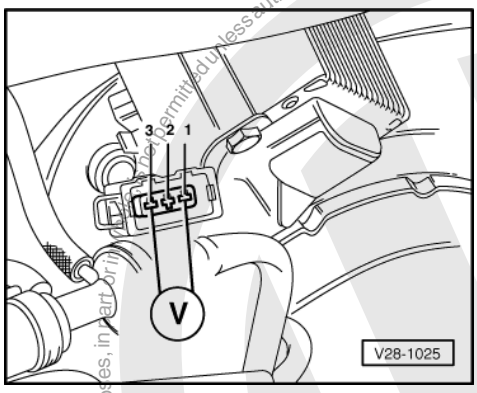
Checking voltage supply

- Pull 3 pin connector off ignition transformer.



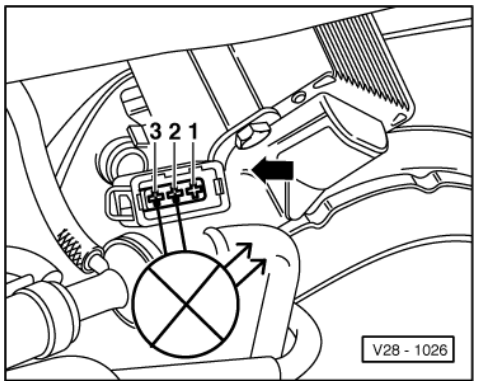
- -> Connect multimeter to measure voltage using aux. cables from V.A.G 1594 to the contacts 1+3 of the disconnected connector.
- Switch ignition on.
  Specification: at least 11 V

If no voltage is present:

- Switch off ignition.
- Check wire between 3 pin connector contact 1 and earth for open circuit according to current flow diagram.
  Wire resistance: Max. 1.5 ω
- Check wire between 3 pin connector contact 3 and relay plate for open circuit according to current flow diagram.
  Wire resistance: Max. 1.5 ω

Checking activation

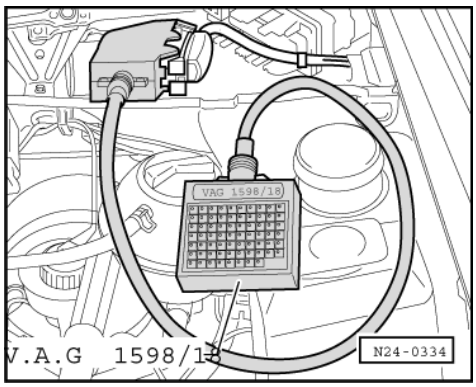
- Pull connector off injectors.



- -> Connect diode test lamp V.A.G 1527 using aux. cables from V.A.G 1594 and adapters V.A.G 1594/15 to contacts 2+3 of the connector.
- Operate starter and check ignition signal from Motronic control unit.
  LED must flicker

The LED does not flicker:

satelettronica



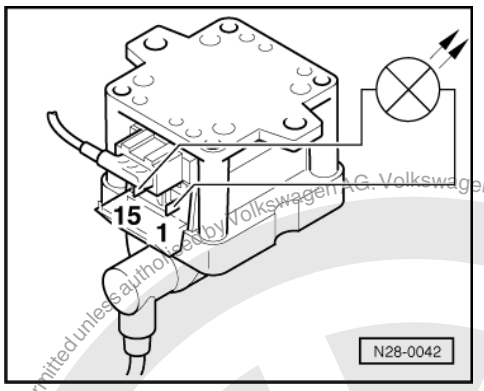
- -> Connect test box V.A.G 1598/18 to control unit wiring loom.
- Check wire between test box socket 7 and 3 pin connector contact 2 for open circuit according to current flow diagram.
  Wire resistance: Max. 1.5 ω
- Additionally check wires for short to one another.
  Specification: ∞ω

If no wiring fault is detected and voltage was present between contacts 1+3:

- Renew Simos control unit (J361)
  =>Page 25 , item 9 .

If the voltage supply and activation is OK.:

- Connect 3 pin connector and H.T. cable to ignition transformer.



- -> Connect diode test lamp using aux. cables and clamps to the contacts 1 and 15 on ignition transformer.

Warning! During the following test do not touch the terminals of the ignition transformer or test cables.

- Operate starter.
  The LED must flicker
